Adding TruFleet Plus Interface to Scout Console

Table of contents

Table of contents	1
Prerequisites	2
Step-by-Step Guide	2
Deploying via Scout Central Distributor	3
Troubleshooting Tips	3

Prerequisites

- Administrative access to Scout Manager
- IP address or DNS name of your TruFleet Plus Server
- A working Scout Central Distributor for deployment

Step-by-Step Guide

1. Enable Edit Mode

In Scout Manager, click the lock icon to unlock design and configuration changes.

2. Open the Configuration Tab

The Configuration tab is pinned to the left side of Scout Manager. Click it to reveal Consoles, Screens, and other objects.

3. Select Your Console

Under **Consoles** in the Configuration tab, find and select the console you wish to modify.

4. Create a New Screen

- In the same Configuration view, expand the **Screens** node (this is a global list).
- Right-click **Screens** and choose **Add New Screen**.
- Name it (for example, “TruFleet View”) and save.

5. Assign the New Screen as Startup

- Return to **Consoles**.
- With your console selected, set its **Startup Screen** property to “TruFleet View.”

6. Add the Browser Pro Element

- Still in the Configuration tab, expand **Screens** → **TruFleet View**.
- Select the “TruFleet View” screen.
- From the Toolbox, drag **Browser Pro** onto the canvas and resize it to fill the view.

7. Configure the TruFleet URL

- Select the Browser Pro element.
- In its Properties pane, enter your server’s address in the URL field, for example:

None

`http://<Your-TruFleet-IP-or-DNS>/`

- Append any required path (for example, `/login`).

8. **Save and Exit Edit Mode**

Click the lock icon to lock the configuration. Then save your Scout Manager project to persist all updates.

Deploying via Scout Central Distributor

1. Open **Scout Central Distributor**.
2. Select the Site or Console you updated.
3. Click **Deploy** to push the new configuration live.

Changes—including your new screen and Browser Pro settings—will automatically propagate to the console.

Troubleshooting Tips

- **Error Screen?**
 - Verify the console's Network IP/Host Name.
 - Ensure network reachability to the TruFleet server.
 - Check the Browser Pro URL for typos or missing segments.
- **Screen Not Showing?**
 - Confirm "TruFleet View" is set as the console's Startup Screen or linked via an Action Button.
